

Hall-Effect Displacement Sensor W/ Linear Output (HL)

Non-contact magnetic sensors that are designed to respond to a wide range of positive or negative magnetic fields and can sense relatively small changes in a magnetic field. By having magnet as a target, this unit produces a Ratiometric Rail-To-Rail linear output. It also has an internal amplifier to boost the output to a higher level. These sensors are ideal for applications such as magnetic flux measurement, displacement, and linear output rotary measurement.

Common Applications: Magnetic Flux measurement, Displacement, Linear output rotary measurement.
